We empower you through advanced technology

Student Loans of North Dakota

Peer-to-Peer Mentoring leads to long-term development solutions

In the fall of 1999, PTI partnered with SLND to jointly complete a large-scale enterprise development project. The goal of this project was not only to deliver a world-class enterprise solution, but also to train SLND engineers in effective analysis and design methods, modern programming techniques, and project-specific architecture and implementation details.

This technical partnership created a world-class, full-functioned Guaranty Solution that PTI has added to its product line. The Priority Guaranty Solution is currently being used by SLND for its production guaranty operations.

Education Assistance Corporation

PTI's e-Business Immersion Program helps EAC form technology strategy and blueprint

Education Assistance Corporation (EAC) guarantees student loans under the Federal Family Education Loan Program. Through their subsidiary, EASCI, they service student loans for lenders. They also provide financial information and technical service to students and schools.

EAC has completed PTI's e-Business Immersion Program, a low-cost, low-risk way to form a strategic e-Business plan and get solid recommendations for proceeding.

National Council for Higher Education Lending Programs

PTI builds Meteor as investment to demonstrate capabilities and develop relationships

PTI has partnered with NCHelp and the organizations that it represents to design and construct a software system, the Meteor Project. The Meteor Project is an initiative to build Internet-based software that allows schools and borrowers to get student-specific financial aid information from multiple distributed sources. These sources include guaranty agencies, lenders, student loan servicers, secondary markets, and the Federal Office of Student Financial Assistance (SFA). PTI is proud of its accomplishments and the accomplishments of the entire Meteor Advisory Team.
